BRANCH PROTECTION

- ☒ **Require status checks to pass**
Choose which status checks must pass before the ref is updated. When enabled, commits must first be pushed to another ref where the checks pass.

Hide additional settings ^
- ☐ **Require branches to be up to date before merging**
Whether pull requests targeting a matching branch must be tested with the latest code. This setting will not take effect unless at least one status check is enabled.
- ☐ **Do not require status checks on creation**
Allow repositories and branches to be created if a check would otherwise prohibit it.

Status checks that are required			+ Add checks ▾
coverage	 GitHub Actions		
test	 GitHub Actions		

- ☒ **Block force pushes**
Prevent users with push access from force pushing to refs.
- ☐ **Require code scanning results**
Choose which tools must provide code scanning results before the reference is updated. When configured, code scanning must be enabled and have results for both the commit and the reference being updated.
